APPENDICES 39

INTRODUCTION

The 2021-22 New York State Child Care Market Rate Survey (Market Rate Survey) was conducted by the Human Services Call Center (HSCC) on behalf of the New York State Office of Children and Family Services (OCFS). The survey was administered by telephone between September 15, 2021, and February 28, 2022. Data were collected for an additional month on a volunteer, primarily self-service basis using an online survey form with a phone number option.

Federal statute, 42 USC 9858c(c)(4)(A), and federal regulation, 45 CFR 98.45(a) require that the state establish payment rates for child care assistance that are sufficient to ensure equal access to child care services for eligible children that are comparable to those provided to families that are not eligible to receive child care assistance. Further, federal regulation 45 CFR 98.45(b)(2) requires that the state summarize how payment rates are adequate based on the most recent market rate survey or alternative methodology conducted no earlier than two years prior to the submission date of the current New York State Child Care and Development Fund (CCDF) Plan. Additionally, section 410-x(4) of New York State Social Services Law requires that payment rates must take into account the variations in the costs of providing child care in different settings, to children in different age groups, and any additional costs of providing child care for children with special needs.

Market rate surveys offer an assessment of the price of care from a parent's perspective, i.e., the price charged by the provider and paid by the parent. Regardless of whether a state uses a market rate survey or an alternative methodology to set their child care assistance payment rates, states must also conduct a more narrowly focused cost analysis which is referred to as a "narrow cost analysis" (NCA). The NCA examines the cost of meeting basic health, safety, quality and staffing requirements (base level care) and higher-quality care at each level of quality. The analysis must also identify gaps between the cost of care and child care assistance levels adopted by the state to be considered as part of the rate setting process. States have flexibility in determining what approach to take for their NCA, including leveraging existing studies, readily available data, and public cost modeling tools, such as the Provider Cost of Quality Calculator (PCQC). In order to satisfy the NCA requirement in relation to the 2022 market rates, OCFS used a combination of these options, both leveraging an existing study (New York State Cost of Quality Child Care Study conducted by the Center for American Progress in 2019) and updating that work where possible using the PCQC.

Due to the overwhelming impact of COVID-19 on the child care community, the CCDF Plan due June 1, 2021, allowed states to request a one-year waiver for both the market rate survey and the NCA. New York received a one-year waiver of both requirements. Rather than conduct a market rate survey beginning in September of 2020 and updating child care assistance payment rates by October 1, 2021, the timeline for the market rate survey and narrow cost analysis was pushed forward one year.

The Market Rate Survey was undertaken to determine the prices that licensed, registered, and permitted child care providers charge parents for child care throughout New York State. The data was then used as the basis for establishing market-related payment rates for the New York State Child Care Block Grant (NYSCCBG) assistance program for low-income families (commonly referred to as “the market rates”). Section 410-x(4) of the Social Services Law provides that the amount of payments for child care services under the NYSCCBG must be the “actual cost of care” up to the applicable market related payment rate. Title 18 of the Official Compilation of Codes, Rules, and Regulations of the State of New York (NYCRR) Section 415.1(m) defines “actual cost of care” as “the rate usually charged by the child care provider for non-subsidized child care services.” It should be noted that the rates reported by child care providers on the Market Rate Survey are the prices that parents are charged for care (i.e., the cost to the parent), not the cost to the program to provide such care.

MARKET RATE SURVEY DATA COLLECTION

Overview of the Survey Process

The Market Rate Survey was conducted primarily as a telephone survey with a stratified random sample of licensed/registered/permitted child care providers selected from across New York State. Data were collected from September 2021 to March 2022 by the HSCC on behalf of OCFS. OCFS worked with the HSCC, both prior to survey initiation and throughout data collection, to provide training and background information about child care services, develop data collection tools and scripts, and answer questions.

Prior to the initiation of telephone calls, a letter (Appendix 1) was sent to all licensed/registered/permitted child care providers to inform them about the upcoming survey and to provide them with a one-page, hard-copy questionnaire (Appendix 2) that was a shortened version of what they would be asked in the telephone survey. The hard-copy questionnaire was sent in advance of the telephone survey so that providers could be prepared if they were called and chose to participate in the survey. OCFS also contacted providers directly and reached out to key stakeholders to contact providers about the Market Rate Survey and encourage provider participation. Participation in the survey was voluntary and anonymous. No incentive was offered to child care providers for their participation in the survey.

Upon completion of the outbound telephone survey in February 2022, OCFS notified providers that the survey would remain open for one additional month, allowing providers the option to complete the survey online or by phone with the HSCC. Upon completion of data collection, the HSCC sent all data to OCFS for review and analysis.

Stakeholder Input and Survey Content

OCFS created the questionnaire and telephone interview script used in the Market Rate Survey with stakeholder input solicited from the

- HSCC;
- Civil Service Employees Association (CSEA), Local 1000, AFSCME, AFL-CIO, the union that represents home-based child care providers outside of New York City;
- United Federation of Teachers (UFT), the union that represents home-based child care providers in New York City;
- New York State Council on Children and Families; and
- New York State Early Childhood Advisory Council.

The content of the Market Rate Survey has remained relatively stable over the past five surveys, particularly the questions pertaining to the rates charged, which form the bulk of the survey. The survey asked providers to report on their full-time and part-time rates for four age groups of children. For school-age children, the survey also asked providers for their rates when school is not in session, such as holidays and school vacations.

Provider Notifications

Prior to the start of the telephone survey, OCFS mailed a letter (Appendix 1) along with a shortened survey questionnaire (Appendix 2) to all licensed and registered child care providers in the state as well as permitted group day care programs located in New York City. The letter served to notify child care providers about the possibility that they could be called to be invited to participate in the Market Rate Survey. The mailing included a Spanish translation of both the letter and questionnaire.

OCFS also sent emails to all licensed and registered providers with an email address on record in the Child Care Facility System database, both at the start of the telephone survey and four additional times during the telephone survey campaign. Upon completion of the outbound telephone survey, OCFS notified providers that the survey would remain open for one additional month, allowing providers the opportunity to self-complete the survey online or to phone the HSCC to complete the survey over the telephone.

Stratified Sampling

The purpose of the Market Rate Survey was to collect child care rate data that would be used to establish market-related payment rates for the NYSCCBG assistance program such that those payment rates ensure that recipients of child care assistance from across the state are able to access the full range of provider types. Therefore, a stratified sampling approach was taken, where statistically valid sample sizes were calculated for each of 20 combinations of provider type and county cluster group (see below for detailed information on the provider types and five county clusters).

Sample size was calculated for each provider type and county cluster stratum using a 95% confidence level and 5% margin of error based upon the anticipated provider universe size.

Provider Types

The Market Rate Survey included licensed, registered, and permitted child care providers in New York State, both center-based programs and home-based providers. The specific provider types are:

- Center-based providers
    - Day Care Centers (DCC). The survey universe included all DCCs in New York State, both of those located
        - outside of New York City, which are licensed by OCFS, and
        - in New York City, which are permitted by the New York City Department of Health and Mental Hygiene (referred to as Group Day Care in New York City), but are collectively grouped with other Day Care Centers in this report and in the child care assistance payment rate structure.
    - School-Age Child Care programs (SACC)
    - Small Day Care Centers (SDCC). The survey universe did not include SDCCs because there were none currently open at the start of the survey when the provider list was compiled.

- Home-based providers
    - Family Day Care homes (FDC)
    - Group Family Day Care homes (GFDC)

In addition to these child care providers, New York State also recognizes three types of legally exempt child care, meaning that the providers are not required to be licensed, registered, or permitted by New York State or New York City. The three legally exempt provider types are in-home (meaning in the child's own home), family child care (in a home that is not the child's), and group (programs located in a facility, other than a residence, such as summer day camps and child care programs operated by, and on the grounds of, a school). Legally exempt child care providers are required to become enrolled with OCFS if they want to provide care to and receive payment for children receiving child care assistance under the NYSCCBG. There are an unknown number of additional legally exempt child care providers who could not be identified by OCFS because they do not care for any children receiving child care assistance. As such, legally exempt providers could not be included in a representative and valid survey because only a subset of the entire universe of legally exempt providers were known to OCFS and reachable. Therefore, the universe of child care providers for the Market Rate Survey was composed of licensed/registered/permitted child care providers only.

County Cluster Groups

There are 58 local social services districts (referred to as "districts" in this report) in New York State that administer the child care assistance program within the district. Each district consists of a single county, except for the district of New York City, which comprises five boroughs, each of which is a county. The number of licensed/registered/permitted child care providers varies considerably across New York State (Table 1). Many districts have too few licensed/registered/permitted child care providers to reliably conduct a survey and establish market-related payment rates that are representative of the population of child care providers in that provider type and county. Therefore, districts are clustered in order to attain statistically valid and reliable samples for each provider type (DCC, SACC, FDC, and GFDC) and age group. These are called county clusters.

The composition of the five county clusters was first established over 15 years ago based on cost of care data from a mail-in child care provider rate survey. Prior to conducting the 2021-22 Market Rate Survey, a cluster analysis was performed using the 2017-18 Market Rate Survey data (the most recent previous survey) in order to assess the composition of county cluster groupings and whether those county groupings should be changed. Cluster analysis is a statistical technique that sorts data into groups in such a way that the members within a group are more similar to each other than to the members of other groups. Cluster analysis of the 2017-18 rate data indicated that the composition of the clusters should remain the same in the 2021-22 Market Rate Survey. The county clusters for the 2021-22 Market Rate Survey were as follows:

- Cluster 1: Nassau, Putnam, Rockland, Suffolk, Westchester
- Cluster 2: Columbia, Erie, Monroe, Onondaga, Ontario, Rensselaer, Schenectady, Tompkins, Warren

- Cluster 3: Allegany, Broome, Cattaraugus, Cayuga, Chautauqua, Chemung, Chenango, Clinton, Cortland, Delaware, Essex, Franklin, Fulton, Genesee, Greene, Hamilton, Herkimer, Jefferson, Lewis, Livingston, Madison, Montgomery, Niagara, Oneida, Orleans, Oswego, Otsego, Schoharie, Schuyler, Seneca, St. Lawrence, Steuben, Sullivan, Tioga, Washington, Wayne, Wyoming, Yates
- Cluster 4: Albany, Dutchess, Orange, Saratoga, Ulster
- Cluster 5: Bronx, Kings (borough of Brooklyn), New York, Queens, Richmond (borough of Staten Island)

Additional Survey Questions

The Market Rate Survey included a few questions about child care assistance and price changes, including 1) whether the provider's prices had changed in the past year and why, 2) whether there are barriers to caring for children receiving child care assistance, 3) whether the provider has children receiving child care assistance payments enrolled in their program, and 4) how their private pay rates charged compared to the 2019 market rates.

Quality Assurance Follow-Up Calls

After the completion of the Market Rate Survey, OCFS conducted follow-up phone calls with a random selection of survey respondents in order to verify the accuracy of price data collected during the survey.

MARKET RATE SURVEY DATA ANALYSIS

Upon completion of data collection by the HSCC, all survey data were sent to OCFS for review and analysis.

Data Checking and Cleaning

- ### Complete surveys

  A survey record was counted as completed as long as a provider reported one or more child care rates. If any of the additional survey questions were not completed, the provider's record was maintained in the survey database. Therefore, some of the additional question results may have smaller sample sizes than the total number of survey participants (n=4,498 responses, of which n=7 responses were excluded as outliers).

- ### Reasonable numerical ranges

  OCFS checked the data by flagging values outside of reasonable numerical ranges for hourly, daily, weekly, and monthly rates for all age groups.

- ### Internal consistency checks

  OCFS flagged inconsistencies in rates for individual providers for further data checking. For a given provider, part-time weekly and monthly rates should be no more than corresponding full-time weekly and monthly rates. For a given provider, the rates for older children are expected to be no more than the rates for younger children.

- ### Treatment of flagged values

  Each flagged value was compared to an individual provider's other rates as well as to the rates of other providers of the same provider type and county cluster in order to identify correctable errors. An example of a correctable data entry error would be a flagged rate of $300 per day for infants. The same provider reported rates of $275 per week for toddlers and $250 per week for preschoolers. The rate of $300 per day for infants was flagged because it was beyond the reasonable numerical range and was well beyond the highest rate reported by all other providers per day for infants. Because a rate of $300 per week was consistent with the provider's other rates and the rates reported by other providers of the same provider type and county cluster, the value was changed to $300 per week.

  If an obvious correction could not be determined for a flagged value based on the provider's other rates, then the recorded values were kept in the dataset unchanged unless the rates fell well beyond the reasonable numerical range, i.e., extreme outliers. In such cases, other information about the program typically indicated that the data should be excluded from analysis because the program was not part of the intended universe for the survey (child care market utilized by and paid for by working families).

Data Conversions

The Market Rate Survey collected price data from child care providers charged on a per-hour, -day, -week, or -month basis. However, the New York State child care market rates are established for the following rate types: weekly, daily, and part-day. Prior to 2022, New York also established

hourly market rates. Whenever possible, the price data that was reported by providers was used as reported. When a provider's price structure could not be directly mapped to a New York State child care market rate, then the original price data were converted as follows.

- **Weekly market rates**
  - For infant, toddler, and preschool-age children:
    - Full-time per-week prices were used as the weekly rate without conversion whenever reported.
    - If there was no full-time per-week price reported for a particular age group, then the next available converted price was used.
      - Per-month prices were divided by 4.33.
      - Per-day prices were multiplied by 5.
  - For school-age children:
    - School vacation per-week prices were used as the weekly rate without conversion whenever reported.
    - If there was no school vacation per-week price reported, then the next available school vacation converted price was used.
      - Per-month prices were divided by 4.33.
      - Per-day prices were multiplied by 5.
- **Daily market rates**
  - For infant, toddler, and preschool-age children:
    - Full-day prices were used as the daily rate without conversion whenever reported.
    - If there was no full-day price reported for a particular age group, then the maximum full-time converted price was used.
      - Per-week full-time prices were divided by 5.
      - Per-month full-time prices were divided by 21.65.
  - For school-age children:
    - School vacation full-day prices had no conversion.
    - If there was no vacation full-day price reported, then the maximum school vacation converted price was used.
      - Per-week vacation prices were divided by 5.
      - Per-month full-time prices were divided by 21.65.
- **Part-day market rates**
  - Calculated as two-thirds of the daily market rates. The Market Rate Survey did not include questions on the cost of part-day care, but the New York State market rates include a part-day category that covers half the amount of time as the daily payment rates (3-6 hours compared to 6-12 hours). To calculate a part-day payment rate, two-thirds (instead of one half) of the daily rate was chosen to reflect economies of scale, i.e., higher per-hour cost for a lower number of hours in care.

Legally Exempt Child Care Provider Market Rates

Since the total universe of legally exempt child care providers is not known to OCFS and a representative sample could not be selected for inclusion in the Market Rate Survey, OCFS used

an alternative methodology to derive child care market rates for legally-exempt child care providers. It is common for states to set payment rates for legally exempt child care providers at a percentage of the payment rates for corresponding types of licensed, registered, or permitted child care (see 45 CFR Part 98, CCDF final rule, published in the *Federal Register*, Vol 81, No. 190, 9/30/2016, p. 67509).

- **Legally exempt family and in-home child care providers**
  - New York State legally exempt family and in-home child care provider standard market rates were calculated as 65% of the corresponding registered family day care market rates for each county group, age group, and rate type.
  - New York State legally exempt family and in-home child care provider enhanced market rates were calculated as 70% of the corresponding registered family day care market rates for each county group, age group, and rate type. The enhanced market rate is available to legally exempt family and in-home child care providers who have demonstrated to the enrollment agency that they have completed 10 or more hours of training annually in the areas set forth in section 390-a(3)(b) of the Social Services Law.
  - Districts have the option to increase the enhanced market rate for eligible legally exempt family and in-home child care providers up to a maximum of 75% of the corresponding registered family day care market rates for each county group, age group, and rate type.
- **Legally exempt group child care programs**
  - New York State legally exempt group child care program standard market rates were calculated as 75% of the corresponding licensed/permitted day care center rates for each county group, age group, and rate type.
  - Districts have the option to establish up to two enhanced market rates for eligible legally exempt group child care programs, each of which may be set at any whole number percentage greater than 75% and up to a maximum of an additional 6% of the corresponding licensed/permitted day care center rates for each county group, age group, and rate type.
  - The enhanced market rates, referred to as Enhanced Market Rate-Health and Enhanced Market Rate-Training (see OCFS policy directive 18-OCFS-ADM-10), are only available if the paying district has elected to establish such a rate as indicated in their Child and Family Services Plan, and the legally exempt group child care program has demonstrated to the enrollment agency that they meet the additional requirements.

2022 New York State Child Care Market Rates

The 2022 child care market rates were established at the 80th percentile of the prices reported by providers on the 2021-22 Market Rate Survey. Market rates were established for each county cluster, provider type, age group, and rate type.

- County Clusters: 1 (Long Island and metro north), 2 (upstate-urban), 3 (upstate-rural), 4 (upstate-metro north and capital), 5 (New York City)
- Provider Types: Day Care Centers (DCC), School-Age Child Care (SACC), Family Day Care (FDC) and Group Family Day Care (GFDC) combined, Legally Exempt

Group Care (LEGC), and Legally Exempt Family Child Care (LEFC) and Legally Exempt In-Home Child Care (LEIH) combined

- Age Groups: Infant (defined as less than 18 months for DCCs, less than 2 years for FDCs and GFDCs), Toddler (defined as 18 months through 2 years for DCCs, 2-years-old for FDCs and GFDCs), Preschool (defined as 3 through 5 years), School-Age (defined as 6 through 12 years)
- Rate Types: Weekly, Daily, Part-Day, Hourly

Prior to the 2015 survey, FDC and GFDC providers' data were analyzed separately and resulted in different sets of child care market rates for the two provider types. FDC and GFDC providers' data were combined for the analysis of the Market Rate Survey data beginning in 2015 and continuing with the 2017-18 and 2021-22 surveys. A single set of child care market rates applies to both provider types. These two provider types were combined because the health and safety regulations, including staff/child ratios, governing the two provider types have become much the same over the years, with the primary regulatory distinction between the two being capacity.

A percentile is a statistical measure that indicates the value below which a given percentage of observations fall. For example, the 80th percentile rate was the rate below which 80% of all rates could be found. Or, in other words, eight out of 10 providers charged a rate that was at or below the 80th percentile rate. And conversely, two out of 10 providers charged a rate that was at or above the 80th percentile rate. Percentiles are particularly useful here because outliers and skewed data distributions have a much smaller impact on a percentile than they would on measures of central tendency, such as an average.

MRS RESULTS

Response Rates

Out of a total of 17,265 licensed, registered, and permitted child care providers as of September 2021, 15,392 providers were randomly selected to be contacted and invited to participate in the Market Rate Survey. From one to 10 call attempts were made in an effort to recruit survey participants. Of selected providers, 642 were determined ineligible to participate in the survey because they had closed their operation, were not able to be contacted due to a wrong telephone number, or were fully funded programs (i.e., parents were never charged a fee, such as Head Start and Advantage After School). Of the remaining 14,750 providers with survey attempts (Table 2a), 4,498 providers completed the Market Rate Survey (Table 3), for an overall response rate of 30% (Table 4a). However, a considerable number of providers (n=6,944) were never reachable; therefore, their eligibility and willingness to participate could not be determined. Of providers who could be reached (n=7,806, Table 2b), a much higher response rate was achieved (58%, Table 4b). Response rates varied considerably by county group and provider type. In each county group, licensed/permitted programs had higher response rates than corresponding registered programs did (i.e., DCC programs had higher response rates than SACCs, likewise for GFDCs compared to FDCs). And the lowest response rates were for SACC programs.

Quality Assurance Follow-Up Call Results

Quality assurance follow-up phone calls were conducted in April of 2022. Follow-up calls focused on providers who reported full-time prices for infants, toddlers, or preschoolers on the original survey because they tend to have the most stable and consistent definitions of “full-time” care. Of the 360 providers randomly selected for a follow-up call, 173 providers were reached and reported their current prices for comparison with the original survey. Sixty percent of the prices were exactly the same or reasonably similar across the two surveys (within plus or minus $50 per week). Larger price differences were also found from the original survey, however these included both price increases (26%) and decreases (14%).

Some price differences from the original survey may reasonably be expected due to the differences in the timing of when the calls were conducted (from one to eight months apart) and/or the slightly different wording of the questions. While the original survey was conducted over a seven month period, which might normally show providers changing their prices, the particular time period from September 2021 to April 2022 saw significant shifts in the overall economy with rising inflation, a tight labor market, and increased minimum wage. Additionally, most licensed, registered, and permitted child care providers received child care stabilization grants due to the COVID-19 pandemic, which could have affected their businesses, including prices. The comparison of prices from the original survey and follow-up calls shows that most providers prices were relatively stable, but there is some fluidity in the child care market with prices shifting both higher and lower. The use of a percentile to establish the child care market rates is less influenced by outliers than measures of central tendency. Prices shifts in opposite directions will offset and have little impact on the dollar value of a given percentile.

Child Care Assistance Program Market Rates

- ### 80th Percentile

The Child Care Assistance Program Market Rates for 2022 (Table 5) were established at no less than the 80th percentile of the rates reported in the 2021-22 Market Rate Survey for each county cluster, provider type, age group, and rate type, much higher than in recent rate changes. In 2014, 2016, and 2019, New York established market rates at the 69th percentile of the rates reported in the most recent Market Rate Survey conducted prior to each rate change.

All of the 2022 market rates were established at the 80th percentile, except for the infant weekly rate in county group 5, day care centers, which was set at the 83rd percentile of the rates reported on the survey. The 80th percentile was $400 per week, which would have been a reduction from the market rate of $406 set in 2019. Rather than reduce this rate, the 83rd percentile was selected to maintain the weekly rate of $406.

- ### Special Needs Market Rates

The market rates for a child with special needs were previously set at the highest child care market rates in the state, irrespective of age, county group, or provider type for each type of rate, weekly, daily, part-day, and hourly. This resulted in an inequitable potential increase in the market rate for qualifying children with special needs based on the type of child care and location. For example, infant care in a NYC day care center was not eligible for an increase in the weekly rate because it was already the highest rate statewide, whereas a registered family day care in county group 3 could have received an extra $256 per week for caring for a 2-year-old with special needs. With the 2022 market rates, the special needs market rates were equalized across all modalities, ages, county groups, and rate types to a percentage of the applicable market rate as set in policy by OCFS. With the release of 22-OCFS-LCM-14, OCFS set the rate at 115% of the applicable market rate, or 15% above the market rate that would otherwise apply based on the child's age, type of care, county group, and rate type.

- ### Hourly Rates

Prior to 2022, the market rates included hourly rates, which applied to 1) part-time care of less than 30 hours per week and less than three hours per day and 2) care in excess of 12 hours per day by under 15 hours per day. The 2022 market rates no longer include hourly rates. As such, situations that previously would have used an hourly rate in calculating payment shifted to use of the part-day market rates. The removal of hourly rates ensures compliance with 45 CFR 98.45(l)(3)(i), which requires payment on a full-time or part-time basis rather than paying for smaller increments of time.

Rates at Other Percentiles

Although the 2022 New York State child care market rates (Table 5) were established at the 80th percentile of the rates reported in the 2021-22 Market Rate Survey, rates are also presented here at the 50th percentile (Table 6) and 75th percentile (Table 7) of the survey price data. The 50th

percentile (median) is reported because it is a measure of central tendency commonly used to describe a distribution, and the 75th percentile is the benchmark level recommended by the Administration for Children and Families as ensuring equal access for families in receipt of child care assistance compared to private pay families.

Provider rate changes

Providers were asked whether their rates had changed in the past year, and if so, what the reasons for the changes were. Just over half of providers (52%) indicated that their rates had not changed in the past year, 43% of providers reported that their rates had increased, and 5% of providers reported decreased rates. This distribution was similar to what was reported on the 2017-18 Market Rate Survey.

In the period between the Market Rate Surveys of 2017-18 and 2021-22, the child care market rates were increased (effective May 1, 2019), and there were increases in the minimum wage on December 31, 2019 and December 31, 2020, as well as during the survey on December 31, 2021. The most reported reason that providers cited for *raising* their rates was salary/wages followed closely by COVID-19. Over half of providers who reported rate increases attributed the increases to salary, food and supply costs, quality improvements, utility costs, and/or building costs (Table 8). Over one-third of providers with rate increases indicated that training, insurance, and new staff were reasons for price increases.

Very few providers reported that they had reduced their rates (5%). The most common reason given by providers who reported rate decreases was COVID-19.

Barriers to caring for children receiving child care assistance

Over half of providers who participated in the survey reported that there were one or more barriers to caring for children in receipt of child care assistance (2,764 / 4,491 = 61.5%, see Table 9). The most cited barrier was that the payment rates are too low (39.9%) Overall, just over half of providers cited one or more payment issues (55.3%), and about half of providers had issues communicating with the county (36.3%). Compared to the 2017-18 Market Rate Survey, a lower percentage of providers reported barriers to caring for children receiving child care assistance.

Participation in the child care assistance program

Despite the barriers reported by providers, 68% of survey respondents reported that some or all their children in care were paid through child care assistance (3,055 / 4,491 = 68%, see Table 10), which was almost the same as the percentage reported on the 2017-18 Market Rate Survey (69%). This is consistent with other data sources. According to the FFY2020-21 ACF-800 annual report, 10,587 licensed, registered, and permitted child care providers cared for one or more children receiving child care assistance during the year, in a year with roughly 17,000 licensed, registered, and permitted providers in New York (62%).

Of those survey respondents who reported caring for children receiving child care assistance, the majority (69.8%) also reported having a contract with a local social services district (LSSD). The validity of this percentage is unconfirmed because there can be confusion among providers as to what constitutes a “contract” with an LSSD. Some survey participants may have responded in the

affirmative to this survey question based on the completion and/or exchange of paperwork with the LSSD that is necessary to process and receive child care assistance payments, rather than having an actual contract with the LSSD.

Of providers who report caring for children receiving child assistance and charging higher rates than the LSSD pays, one-third also reported charging families the difference between their rates and the LSSD payment rate. In New York State, when a provider enters into a contract with an LSSD, the contracted child care assistance payment rate is considered the “actual cost of care,” even if the contracted provider has a higher private pay rate. By entering into such a contract, the provider agrees to accept the contracted rate, which may be lower than the “market rates,” and to not charge the family the difference between the LSSD payment and the private pay rate. Providers may enter into contracts with lower payment rates because of other advantages, such as payments for more absences than required by Social Services Law, program closures, holidays, etc. Among providers with children receiving child care assistance in care who reported that they did not have a contract with an LSSD, one would expect that they would charge the family the difference between the LSSD payment and their private pay rates. However, only 40% reported that they charge families the difference. Data for these two questions (whether providers contract with an LSSD and charging families the amount in excess of the LSSD rates) are surprising and suggest that the questions may have been misinterpreted by some survey respondents. It is also possible that providers absorb costs in excess of current market rates because they know that parents cannot afford to pay them.

NARROW COST ANALYSIS

Methodology

OCFS's NCA drew heavily upon a 2019 analysis of the cost of child care in New York performed by the Center for American Progress, *New York State Cost of Quality Child Care Study*[1]. Results of that analysis are presented for home-based programs where comparisons are made to the market rates.

For day care center costs, the 2019 *New York State Cost of Quality Child Care Study* analysis was updated with available data to the extent possible and using the Office of Child Care's Provider Cost of Quality Calculator (PCQC). The PCQC is a free, online tool available to stakeholders to calculate the cost of providing child care at different quality levels for day care centers and family child care homes. The PCQC calculates the annual expenses and revenues for child care programs based on site-level provider data that is entered in the calculator, including personnel (wages/salary, health insurance, workers compensation, unemployment insurance, disability insurance) and non-personnel costs (such as food, supplies, insurance, building costs, utilities, trainings). The PCQC has default values built in, which can be overridden to customize estimates, based on specific data available and/or scenarios to test. For the day care center analysis, the PCQC default values were used in most cases except for the following:

- **Number of classrooms and square footage**
  The average number of classrooms per day care center and average square footage of classrooms by market rate county group were obtained from the systems of record for licensed day care centers outside of New York City (Child Care Facility System, CCFS) and permitted group day care centers in New York City (Child Care Activities Tracking system, CCAT).
- **Minimum wage**
  The county minimum wage for the market rate county group effective December 31, 2021, was entered in the PCQC. See 21-OCFS-LCM-33.
- **Annual training cost**
  The default annual training cost in the PCQC was $250, which was adjusted to $1000 annually per staff member.
- **Annual health insurance cost**
  The default annual health insurance cost in the PCQC was $0 for each full-time employee, which was adjusted to $5,946 per full-time employee based on the national average of employer contribution according to the annual Kaiser Family Foundation's Employer Health Benefits Survey for 2019.

[1] The New York State Cost of Quality Child Care Study, November 2019, was prepared by Simon Workman and Steven Jessen-Howard of the Center for American Progress, and is made available on Raising New York's website, https://raisingnewyork.org/wp-content/uploads/sites/2/2019/12/NY-Cost-of-Quality-Report-Raising-NY.pdf. Raising New York is a diverse statewide coalition of parent, early childhood, education, civil rights, business, and health organizations dedicated to increasing the number of children who are on track for school readiness, with a focus on improving long-term outcomes for children who are low-income, children of color, and other under-served groups.

- **Salaries**
  One of the largest child care cost drivers is salary. Two scenarios were calculated for day care centers, labeled NCA1 and NCA2. Salary data for each scenario was taken from an analysis conducted by the Center for American Progress, *New York State Cost of Quality Child Care Study*. NCA1 used the 2019 salary data, and NCA2 increased the 2019 salary data by 36%.

For home-based child care, OCFS did not conduct a new PCQC analysis. Rather the NCA results shown here are the scenario 1 results from *New York State Cost of Quality Child Care Study* for family day care and group family day care.

Results for day care centers

The PCQC was run separately to project annual expenses for day care centers in each county cluster and at two levels of quality. The output from each run includes costs of running a day care center which can be split into personnel costs and non-personnel costs at the child, classroom, and site levels. Estimated annual per child costs for infants, toddlers, and preschoolers for each county cluster and each quality level are calculated by adding together the following:

- Personnel costs per classroom divided by maximum capacity per DCC classroom for each age group
- Non-personnel child-level costs divided by average maximum capacity of DCCs
- Non-personnel site costs divided by average maximum capacity of DCCs
- Non-personnel classroom costs divided by maximum capacity per DCC classroom for each age group

A summary of the estimated annual costs by age group, county cluster, and quality level are shown in Table 11 compared to the annual market rates (prices) from 2019 and 2022 (weekly rates times 52 weeks). As the child's age increases, generally the market rates become more closely aligned with the costs of providing child care, if not exceeding the costs. In fact, for preschoolers, which is the age group with the highest capacity, the 2022 market rates exceed base quality-level costs in all county clusters and all but one county cluster for the higher quality level estimates (the exception being county cluster 3, rural counties). Results are shown graphically in Figures 1, 2, and 3 below.

Figure 1. Annual estimated cost of child care at two quality levels (NCA1 and NCA2) compared to annual market rate (MR) prices for 2019 (69th percentile) and 2022 (80th percentile for county clusters 1-4, 83rd percentile for county cluster 5) for infants by county cluster. Note: for county cluster 5, the 2019 and 2022 market rates are the same.

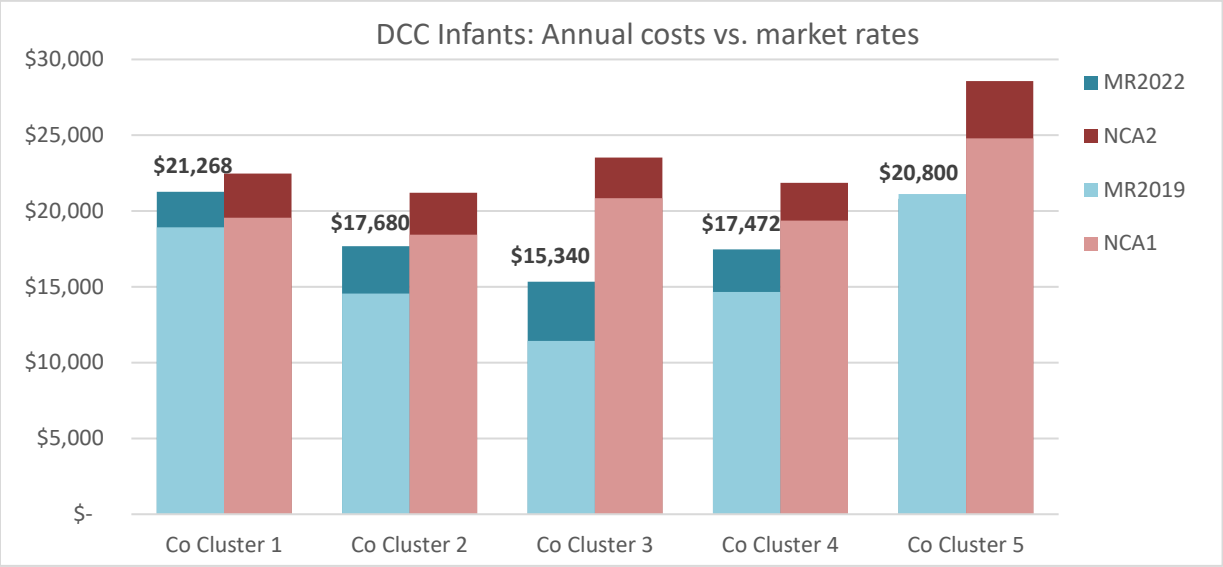

Figure 2. Annual estimated cost of child care at two quality levels (NCA1 and NCA2) compared to annual MR prices for 2019 (69th percentile) and 2022 (80th percentile) for toddlers by county cluster.

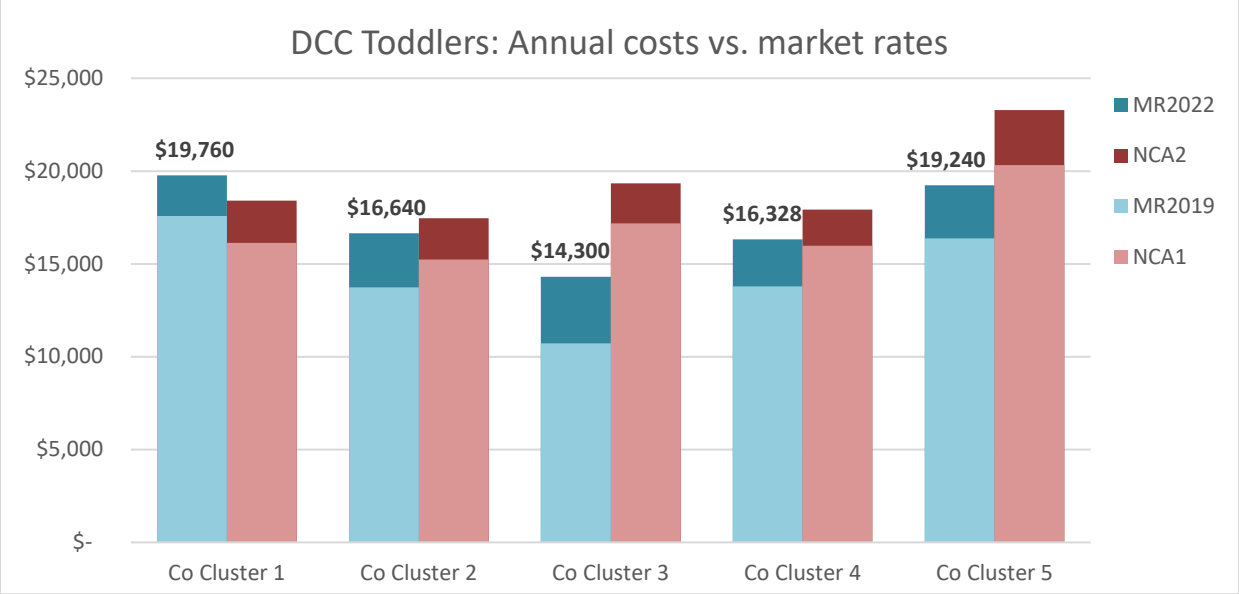

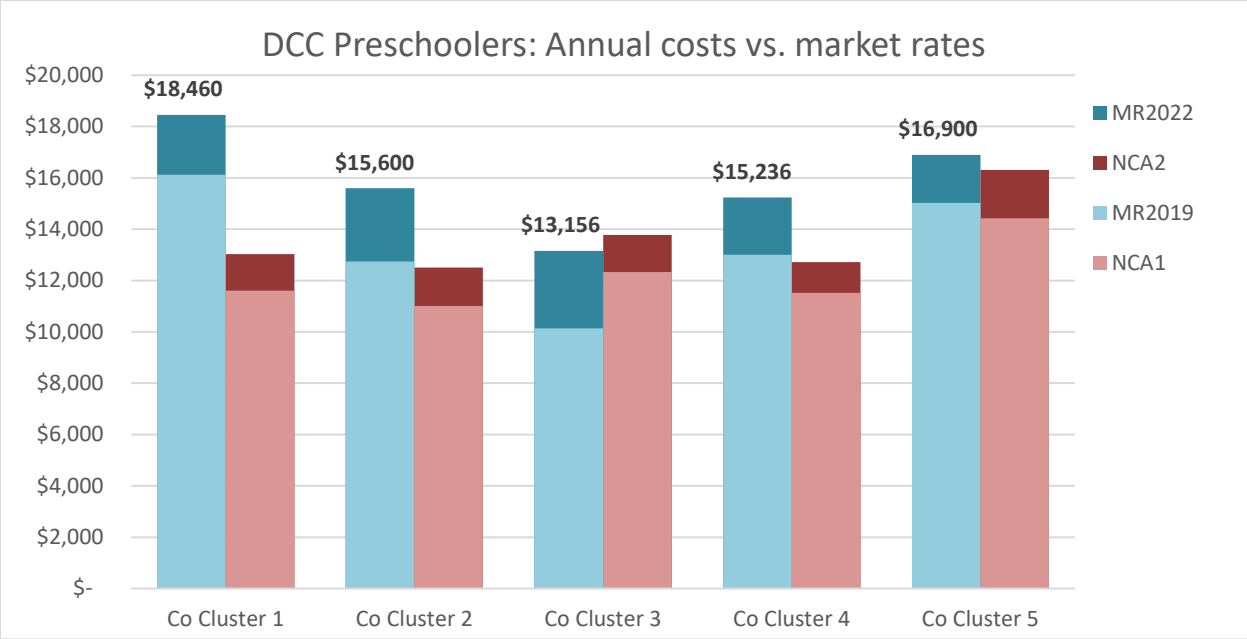

Figure 3. Annual estimated cost of child care at two quality levels (NCA1 and NCA2) compared to annual MR prices for 2019 (69th percentile) and 2022 (80th percentile) for preschoolers by county cluster.

Results for home-based day care

For the NCA for home-based day care, comparisons are shown here of the per child annual full-time payment at the market rates for 2019 and 2022 compared to the scenario 1 results from the *New York State Cost of Quality Child Care Study* for family day care and group family day care (which were calculated using the PCQC). A summary of the annual costs by age group and county cluster for FDC and GFDC providers are shown in Table 12 compared to the annual market rates (prices) from 2019 and 2022 (weekly rates times 52 weeks). Note that the PCQC results in different expenses for small and large home-based child care programs but the per child costs do not distinguish between infants, toddlers, and preschoolers, unlike the market rates for FDC and GFDCs, which may differ across these age groups.

For the NCA, the difference between per child annual costs in FDC and GFDC programs range from about $1,000 to $2,000 depending on the county cluster. The 2019 market rates for home-based care in every age group and every county cluster were considerably less than the NCA costs shown for FDC or GFDC providers. The 2022 market rates increased significantly for home-based care in all ages and county groups, ranging from an annual increase of $2,000 to over $5,000 among non-school age children. The 2022 market rates approached or exceeded parity with costs in county groups 1 to 4. In county group 5, New York City, the market rates increased dramatically from 2019 to 2022, but they still fall short of the costs of providing care, which is estimated to be the highest in the state for home-based modalities. Results are shown graphically in Figures 4, 5, and 6 below.

Figure 4. Annual estimated cost of child care for infants in FDC and GFDC homes (NCA-FDC, NCA-GFDC) compared to annual MR prices for 2019 (69th percentile) and 2022 (80th percentile) for infants by county cluster.

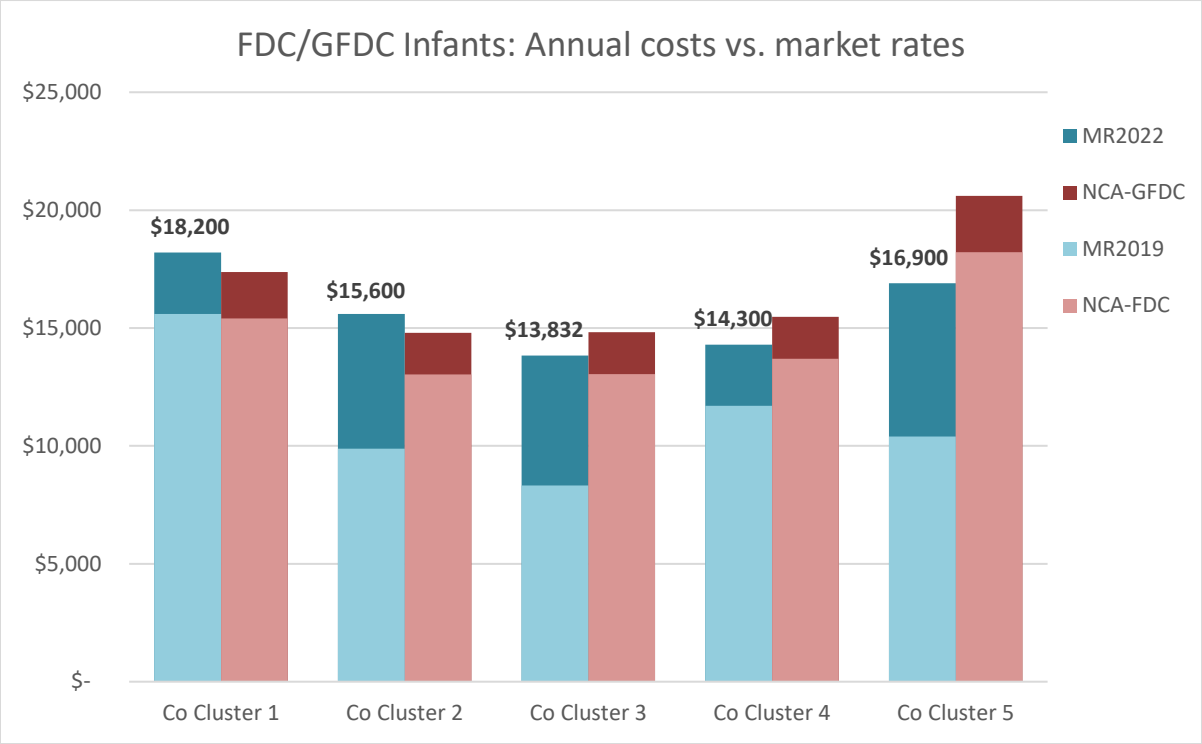

Figure 5. Annual estimated cost of child care for toddlers in FDC and GFDC homes (NCA-FDC, NCA-GFDC) compared to annual MR prices for 2019 (69th percentile) and 2022 (80th percentile) for infants by county cluster.

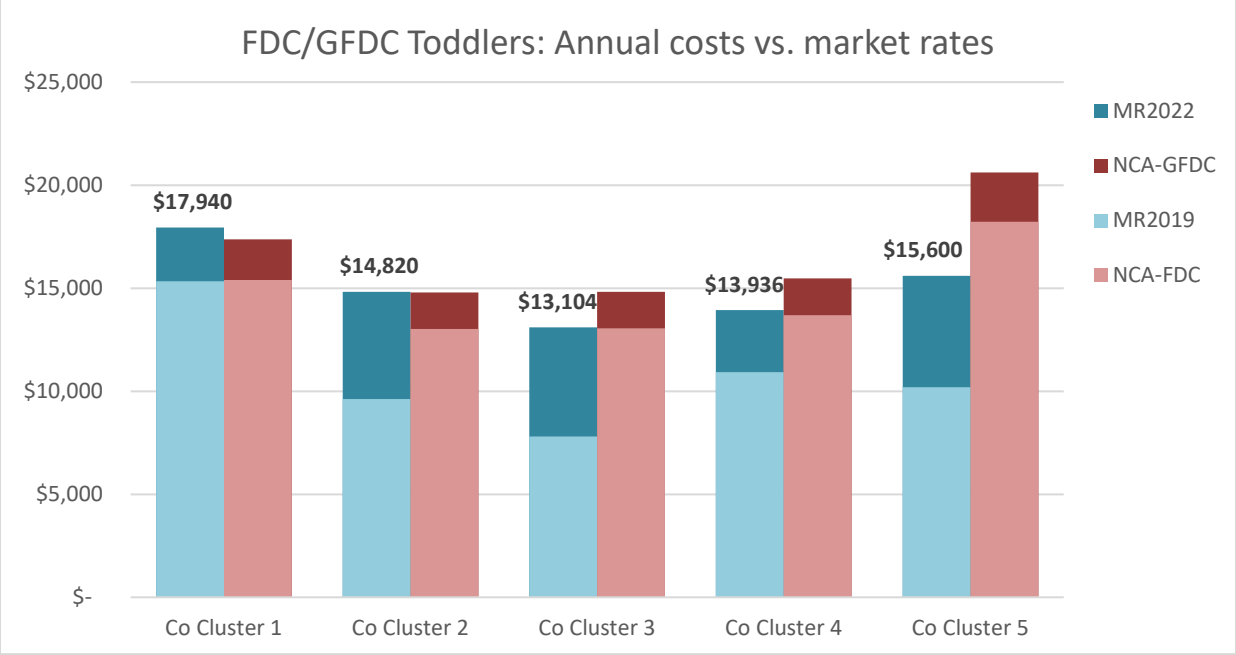

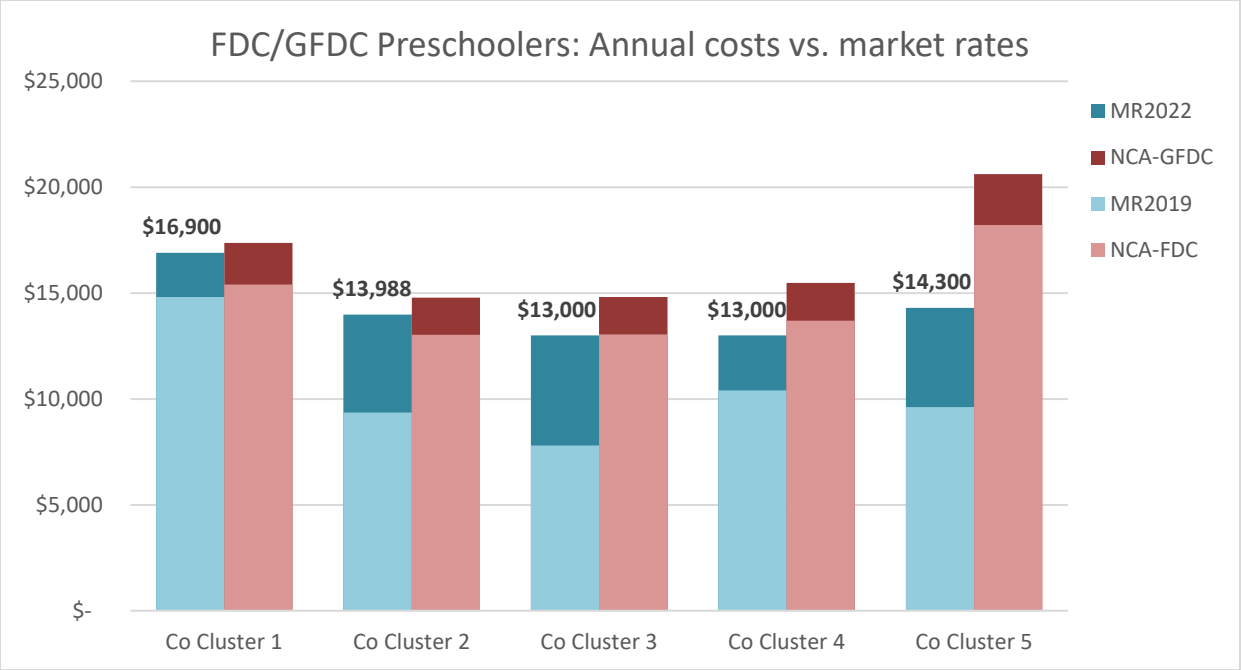

Figure 6. Annual estimated cost of child care for preschoolers in FDC and GFDC homes (NCA-FDC, NCA-GFDC) compared to annual MR prices for 2019 (69th percentile) and 2022 (80th percentile) for infants by county cluster.

RESOURCES

OCFS issues external policy statements on a regular basis on the topic of the child care market rates, which are available on the agency's website at http://ocfs.ny.gov/main/policies/external/. These policy statements include payment rates for child care assistance, as well as policy pertaining to calculating payments for child care assistance.

Abbreviations: I=infant (under one and one half years for center-based care, under two years for home-based care), T=toddler (one and one half years through two years for center-based care, two years for home-based care), PS=preschooler (three through five years), SA=school age (six through 12 years), DCC=licensed/registered/permitted day care center, FDC=registered family day care, GFDC=licensed group family day care, LE-Std=legally exempt family and in-home child care standard rate, LE-Enh=legally exempt family and in-home child care enhanced rate, LEGC=legally exempt group child care, SACC=registered school-age child care.

Table 8. Reasons reported for increases and decreases in the rates that providers charge and the reasons for those changes. 2021-22 New York State Child Care Market Rate Survey (n=4,491).

Rate Increases (n=1,937)			
Reason*	**#**	**% of Providers with Rate Increases**	**% of Providers with Surveys**
COVID-19	1,432	73.9%	31.9%
Salary / wages	1,488	76.8%	33.1%
Food and supplies	1,256	64.8%	28.0%
Utilities	1,168	60.3%	26.0%
Building costs	1,079	55.7%	24.0%
Quality improvement	1,011	52.2%	22.5%
Insurance	762	39.3%	17.0%
Training	725	37.4%	16.1%
New staff	673	34.7%	15.0%
Health insurance	478	24.7%	10.6%
Other	212	10.9%	4.7%
Rate Decreases (n=206)			
Reason*	**#**	**% of Providers with Rate Decreases**	**% of Providers with Surveys**
COVID-19	159	77.2%	3.5%
Fewer children in care	61	29.6%	1.4%
To be more competitive	54	26.2%	1.2%
Decreased costs	29	14.1%	0.6%
More children in care	13	6.3%	0.3%
Other	54	26.2%	1.2%

*Reasons are not mutually exclusive. Providers could select any and all reasons for their rate increase or decrease.

Table 9. Number and percentage of providers reporting barriers to caring for children receiving child care assistance (referred to as "subsidy" in the survey). 2021-22 New York State Child Care Market Rate Survey (n=4,491).

	2022		2018	
Are there barriers to caring for children with subsidy?	**#**	**%**	**#**	**%**
No. There are no barriers.	1,727	38.5%	1,033	27.6%
Yes. There are one or more barriers.	2,764	61.5%	2,709	72.4%
Payment Issues*				
County doesn't pay for absences.	1,440	32.1%	1,505	40.2%
Payment rates are too low.	1,791	39.9%	1,493	39.9%
Takes too long to get paid.	1,225	27.3%	1,319	35.2%
County pays less than my rate.	1,471	32.8%	1,310	35.0%
County doesn't pay for holidays.	1,298	28.9%	1,293	34.6%
Inconsistent subsidy funding.	1,086	24.2%	966	25.8%
Any payment issues (as indicated above)	**2,483**	**55.3%**	**2,390**	**63.9%**
DSS Communication Issues*				
Hard to talk to anyone at the county.	968	21.6%	1,109	29.6%
Don't know if subsidy is authorized when care begins.	686	15.3%	1,313	35.1%
Don't have timely notice when subsidy case closes.	682	15.2%	1,271	34.0%
Paperwork.	868	19.3%	879	23.5%
Any communication issues (as indicated above)	**1,630**	**36.3%**	**2,059**	**55.0%**
Family Issues*				
Parents not paying family share.	813	18.1%	1,054	28.2%
Subsidy ends and kids leave.	1,025	22.8%	1,364	36.5%
Any family issues (as indicated above)	**1,339**	**29.8%**	**1,717**	**45.9%**

*Specific barriers are not mutually exclusive. Providers could select any and all barriers.

Table 10. Participation in the child care assistance program. 2021-22 New York State Child Care Market Rate Survey (n=4,491).

	#	%
Of the children currently enrolled, how is their care paid for?		
All private pay	1,436	32.0%
All social services district (LSSD)	567	12.6%
Both private pay and LSSD	2,488	55.4%
Of those who report being paid by the LSSD, how many have a contract?		
LSSD contract*	2,133	69.8%
No LSSD contract	922	30.2%
Of those who report being paid by the LSSD and charging a higher private pay rate, do you charge the difference between your rates and LDSS rates?		
Yes	423	32.9%
No**	861	67.1%

* The validity of LSSD contract rate is unconfirmed. Some survey participants may have mistakenly indicated that they have a contract based on the completion and/or exchange of paperwork with the LSSD for child care assistance.

** Most respondents who report having no LSSD contracts also report that they do not charge parents the rates in excess of child care assistance payment rates. It is possible that providers truly do not charge parent the excess, but it is also possible that there was confusion regarding the meaning of the questions in this section of the survey.

Table 11. Annual per child costs based on narrow cost analyses at two quality levels (NCA1 and NCA2) compared to the child care market rates established in 2019 and 2022 (MR2019 and MR2022) for child care in day care centers by county cluster and age group.

		County Cluster 1 (NYC Suburbs)	County Cluster 2 (West/ Central Urban/ Suburban)	County Cluster 3 (Rural Upstate)	County Cluster 4 (Albany Area)	County Cluster 5 (NYC)
Infant	MR2019 (69th)	$18,928	$14,560	$11,440	$14,664	$21,112
Infant	MR2022 (80th)	$21,268	$17,680	$15,340	$17,472	$20,800
Infant	NCA1	$19,557	$18,432	$20,852	$19,361	$24,789
Infant	NCA2	$22,468	$21,213	$23,536	$21,855	$28,572
Toddler	MR2019 (69th)	$17,576	$13,728	$10,712	$13,780	$16,380
Toddler	MR2022 (80th)	$19,760	$16,640	$14,300	$16,328	$19,240
Toddler	NCA1	$16,131	$15,236	$17,184	$15,982	$20,325
Toddler	NCA2	$18,401	$17,461	$19,331	$17,918	$23,292
Preschool	MR2019 (69th)	$16,120	$12,740	$10,140	$13,000	$15,028
Preschool	MR2022 (80th)	$18,460	$15,600	$13,156	$15,236	$16,900
Preschool	NCA1	$11,605	$11,012	$12,338	$11,519	$14,426
Preschool	NCA2	$13,025	$12,502	$13,776	$12,716	$16,314

Table 12. Annual per child costs for family day care and group family day care homes from the narrow cost analysis for family day care (NCA-FDC) and group family day care (NCA-GFDC) compared to the child care market rates established in 2019 and 2022 (MR2019 and MR2022) for child by county cluster and age group.

		County Cluster 1 (NYC Suburbs)	County Cluster 2 (West/ Central Urban/ Suburban)	County Cluster 3 (Rural Upstate)	County Cluster 4 (Albany Area)	County Cluster 5 (NYC)
Infant	MR2019 (69th)	$15,600	$9,880	$8,320	$11,700	$10,400
Infant	MR2022 (80th)	$18,200	$15,600	$13,832	$14,300	$16,900
Infant	NCA-FDC	$15,400	$13,030	$13,050	$13,690	$18,220

Acting Commissioner

*******MARKET RATES TELEPHONE SURVEY OF 2021*******

Dear Child Care Provider:

Every few years, the Office of Children and Family Services conducts a survey of the price of child care across the state of New York. This information is very important. It helps us to update child care subsidy payment rates so they reflect local prices. You may be called and asked to participate in this year's *Child Care Market Rate Survey*.

The Market Rate Survey Team will be conducting the survey from September to December, 2021. If you are called, the number on your caller ID will be 844-863-9318. If you choose to participate, you will be asked what you charge for child care and how many children are in your care. Please base your answers using the rates you charge to your "*private pay clients*," not the rates you charge for children whose care is paid for by the county department of social services (or in New York City by the Administration of Children's Services or Human Resource Administration). The survey takes about 15 minutes.

Please do not mail back the enclosed form. Wait for the Market Rate Survey Team to call you. We are providing you with the survey form so that you will be familiar with the questions and be able to answer them more easily during the phone interview, if you are called. If your telephone number has changed, please be sure that your licensor or registrar has your current telephone number so that we are able to reach you. Please tell people who may answer your telephone (staff, volunteers, household members in family day care) about this survey.

The information you give us will be used to make any necessary changes to the child care subsidy rates for your county. Please be assured that the information in this survey will ONLY be used for that purpose. Your individual responses will not be shared with anyone other than the staff who will be data entering and processing the survey results. To meet federal requirements, we may call a few randomly selected providers to verify the information included in the survey.

If you have any questions, please call us at (518) 474-9454.

As a person who cares about children and child care, I know you understand how important it is for the payment rates for child care subsidy to be current. Please consider participating in the survey if you are called. **THANK YOU!**

Sincerely,

Janice Molnar
Deputy Commissioner
Division of Child Care Services

NEW YORK STATE | Oficina de Servicios para Niños y Familias

KATHY HOCHUL

*******ENCUESTA TELEFONICA DE TARIFAS DEL MERCADO DE 2021*******

Estimado(a) proveedor(a) de cuidado infantil:

Cada pocos años, la Oficina de Servicios para Niños y Familias conduce una encuesta del costo de cuidado infantil a través del estado de Nueva York. Esta información es muy importante. Nos ayuda a actualizar las tarifas de pago de cuidado subsidiado para que reflejen los precios locales. Puede que se le llame y pida que participe en la Encuesta de Tarifas del Mercado de este año.

El Equipo de la Encuesta de Tarifas del Mercado estará conduciendo la encuesta desde septiembre hasta diciembre de 2021. Si se le llama, el número en su identificador de llamadas mostrará el 844-863-9318. Si usted elige participar, se le preguntará lo que usted cobra por cuidado infantil y cuántos niños están bajo su cuidado. Por favor proporcione sus contestaciones en base a las tarifas que usted cobra a sus "clientes de paga privada", y no por las tarifas que usted cobra a los niños cuyo cuidado es pagado por el departamento de servicios sociales del condado (o en la ciudad de Nueva York por la Administración de Servicios para Niños o la Administración de Recursos Humanos). La encuesta dura aproximadamente 15 minutos.

Por favor no devuelva el formulario incluido por correo. Espere a que el Equipo de la Encuesta de Tarifas del Mercado lo llame. Le estamos proveyendo este formulario para que se familiarice con las preguntas y pueda contestarlas con más facilidad durante la entrevista telefónica, si se le llama. Si su número telefónico ha cambiado, por favor asegúrese que su licenciante o registrador tenga su número telefónico actual para podernos comunicar con usted. Por favor dígales a las personas que podrían contestar su teléfono (empleados, voluntarios, miembros del hogar en cuidado diurno familiar) sobre esta encuesta.

La información que usted nos brinde será utilizada para hacer los cambios necesarios a las tarifas de subsidio de cuidado infantil para su condado. Por favor tenga la seguridad de que la información en esta encuesta será utilizada únicamente para ese propósito. Sus respuestas individuales no serán compartidas con nadie más que el personal que estará ingresando y analizando datos de los resultados de la encuesta. Para satisfacer los requisitos federales, podremos estar llamando a proveedores seleccionados al azar para verificar la información provista en la encuesta.

Si tiene cualquier pregunta, por favor llámenos al (518) 474-9454.

Como una persona que se preocupa por los niños y su cuidado infantil, sé que usted entiende cuán importante es que las tarifas de cuidado infantil por subsidio estén al día. Por favor considere participar en la encuesta si se le llama. **¡Gracias!**

Sinceramente,

Janice Molnar
Comisionada Adjunta
División de Servicios de Cuidado Infantil

APPENDIX 2

2021 NYS CHILD CARE MARKET RATE SURVEY

NEW YORK STATE | Office of Children and Family Services

CHILD CARE ENROLLMENT & PAYMENT				
1) How many children are *enrolled* in your program for part-time and full-time care, and how old are they?
